**COUPLE EGG MOULD**  
MADE IN PLASTIC  
Art. SCUDS01

“Egg” collection is the newest line from Decosil. A simple but brilliant idea for creating wonderful EASTER EGGS with bas-relief or high relief decorations. The resulting egg seems to be HAND CARVED, but the entire process is really simple.

## STEP BY STEP

1. Lightly dampen the surface of the plastic support with a wet cloth

2. Insert the silicone mould. Be careful that external borders must coincide.

3. Fix the silicone buttons to the plastic support with a pressure from the inside.

4. Fill the mould with precrystallized covering and then make the chocolate coating as thick as you prefer. After that, turn the mould and remove the exceeding chocolate.

5. Let the chocolate drip completely.

6. Lay the mould onto two supports for a few minutes.

7. Holding the mould in one hand, model the borders with the help of a spatula.

8. In order to remove the egg from the mould, press gently the silicone buttons. Once the plastic support is removed, carefully take off the silicone mould from the chocolate starting from the borders to the center.

9. Warm the two halves with a hot plate.

10. Let the exceeding chocolate drip. Combine the two halves and let them solidify completely.
